

## Delft-FEWS North America News

Dear member of the Delft-FEWS user community.

Due to the Covid pandemic, we have not been able to organize in-person Delft-FEWS user days in North America in the past two years. As the [CWRA National Conference](#), held June 5-8th in Canmore, Alberta, will be one of the first in-person event in some years for hydrological practitioners, we saw a great opportunity to bring Delft-FEWS users together. At the CWRA conference, Deltares will be organizing a workshop focused on sharing experiences and practical elements between Delft-FEWS users, providing you with the latest news on Delft-FEWS developments and having dialogue on guiding future development and research efforts.

One of the strengths of the Delft-FEWS platform is that it is embedded with knowledge on operational flow forecasting, collected over many years at water authorities all over the world. The Delft-FEWS User Days, both international and regional that are organised regularly, are an important means to share knowledge and experiences between Delft-FEWS users. Implemented approaches by your neighbours are informative to follow and innovations from the other side of the world can be eye-openers.

The exact program will be published in a few weeks. Expect topics such as experiences with the new seamless Raven integration, the latest on remote sensing and classification of river ice, planning for Delft-FEWS itself, the need for forecast verification and FEWS in the bigger context in Canada. If you want to contribute or have special requests: don't hesitate to contact us!

We look forward to seeing many of you in Canmore!
